Objectives and investment policy

Objective

A combination of income and growth in excess of typical returns in emerging equity markets over the long-term.

- Shares of companies with their registered office in or having their principal business activities in emerging markets

The Fund may also invest in:

- Any other type of security that is consistent with its objective
- Money market instruments

In choosing investments, the investment manager looks for shares of companies that appear to have greater potential to rise in price over the long-term based on analysis of changes in the business environment.

The Fund may use derivatives to reduce risk or to manage the Fund more efficiently.

Designed for Investors who understand the Fund's risks, want an investment focused on emerging markets, and intend to invest their money for the long-term.

This Fund is designed to be used only as one component in several in a diversified investment portfolio. Investors should consider carefully the proportion of their portfolio invested into this Fund.

Lower Risk Higher Risk

1	2	3	4	5	6	7
---	---	---	---	---	---	---

The value of an investment in the Fund can go up or down. When you sell your shares they may be worth less than you paid for them.

The risk/reward rating above is based on medium-term volatility. In the future, the Fund's actual volatility could be higher or lower and its rated risk/reward level could change.

The lowest category does not mean risk free.

The Fund's risk level reflects the following:

- The Fund focuses on countries that have less developed markets
- Emerging markets tend to be more volatile than more established markets and therefore may pose a greater risk. The Investment Manager may experience more difficulty in purchasing or selling investments than in a more developed market.
- As a category shares are, in general, more volatile than either bonds or money market instruments
- Fluctuations in exchange rates may cause the value of your investment to rise or fall

The rating does not reflect the possible effects of unusual market conditions or large unpredictable events. Under normal market conditions the following risks may apply:

Counterparty risk The Fund could lose money if a counterparty with which it transacts becomes unwilling or unable to meet its obligations to the Fund.

Liquidity risk In difficult market conditions certain securities could become hard to value or sell at a desired time and price.

Management risk Investment management techniques that have worked well in normal market conditions could prove ineffective or detrimental at other times.

The full list of the Fund's risks are contained in the "Investment and Risk Considerations" section of the Fund's prospectus.
